右上角为喀斯特森林性状之间的相关性分析, 左下角为非喀斯特森林树种性状之间的相关性。 K_{leaf_max} , 叶片最大导水率; $P50_{leaf}$, 抗栓塞能力; Ψ'_{tp} , 膨压丧失点; F_p , 穿刺力; F_t , 撕裂力; VD, 叶脉密度; LT, 叶片厚度; LD, 叶片密度; LMA, 比叶质量。

Upper right shows the traits correlations across karst forest species, lower left shows traits correlations across non-karst forest tree species. K_{leaf_max} , maximum leaf hydraulic conductance; $P50_{leaf}$, leaf cavitation resistance; Ψ'_{tp} , leaf water potential at turgor loss point; F_p , leaf force to punch; F_t , leaf force to tear; VD, vein density; LT, leaf thickness; LD, leaf density; LMA, leaf mass per area.
