附录I 2020–2024年无养分添加、氮添加、磷添加、氮磷共同添加对3个海拔物种丰富度的影响

Supplement I Effects of no nutrient addition, nitrogen addition, phosphorus addition, and combined nitrogen and phosphorus addition on species richness at three altitudes from 2020 to 2024

2020年数据为实验处理前的本底数据。CK, 对照; N, 氮添加; P, 磷添加; NP, 氮磷共同添加。数值均为平均值±标准误。不同小写字母表示4种养分处理间的差异显著($p < 0.05$)。

The data for 2020 represent the baseline data before experimental treatment. CK, control; N, nitrogen addition; P, phosphorus addition; NP, nitrogen and phosphorus addition. Values are mean $\pm$ SE. Different lowercase letters indicate the significant differences among four nutrient treatments ($p < 0.05$).
